

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

post 5 quantum conjectare potui illa sex fermè digitorum spacio obscurata fuit. Eam vidi per intervalla usque ad horam quintam cum 35 min. quo tempore deerant ad summum 3 min. à totali ejus immersione, tunc autem parva Nubes sed densa ita Lunam operuit, ut eam amplius non viderim & quamvis maxime intentus fuerim, ut si fieri posset ejus Emerfionem viderem nullomodo mihi licuit tum ob crassitiem Vaporum qui erant circa Horizontem, tum ob diei adventantem lucem eam oculis cernere. Ab initio usque ad tempus Immersionis Luna mihi conspicua facta est plusquam Vigesies, sed propter intercurrentes Nubes, & breve temporis spatium quo eam intueri licebat penes me non fuit quidquam exacte, satis definire at quamvis hæc Observatio utilis valde esse non possit ad Lunarios numeros expendendos, illa tamen sufficit ad curiosis satisfaciendum eosque convincendum illos numeros non multum a vero aberrare.

VI. *An Extract of a Letter from Mr Ralph Thoresby, F. R. S. to Dr Nehemiah Grew, Fellow of the College of Physicians and R. S. concerning a Ball voided by Stool.*

**A** Poor Apprentice Girl at *Rawden*, 4 miles from *Leedes* in *Yorkshire*, about 14 years of Age, having been tormented with Colical, and, as was suppos'd, Nephritick Pains for some time; at length voided a roundish Ball, *per Anum*, as hard to feel upon as a Stone.

After a while, the Pains returning with greater violence, so as to make her roul upon the ground, she voided another as hard, and much bigger.

Upon which, one Mrs *Ward* a neighbouring Gentlewoman, who had been much afflicted with Gravel, gave

her some of those Medicins which she us'd to take herself. Whereupon the Girl voided a third Ball, also *per Anum*, with less pain, yet the greatest of the three.

The first of these Balls is smooth and glossy, of the colour of a right Hazel nut, 3 inches about, and somewhat compressed. The other two rough and gritty, and in like manner a little compressed into a kind of obtusely triangular figure. The 2d, is 4 inches and a half round about; the last, 5 inches and a half.

Considering their bulk, all 3 are very light, especially the 2 latter and greater ones, of which the last weighs but 5 Drams 36 Grains; and both of them swim in water.

This lightness proceeds from the Matter whereof they consist; which, in some places is purely Downey or Fuzzy; in others, mixed with a Gritty substance, yet not confusedly, but regularly mixed. The Fuzzy parts possess the central part of the Ball, with a small particle of blackish Glass or other Vitrify'd substance in the very Centre it self. Over which are several Coats, gritty and fuzzy, alternately ending in the circumference with a grit, much resembling the Ground-work and Superstructure of the Oriental Bezoar-stone.

The Powder of one of these Balls scraped off with a Knife, is no way mov'd or affected with any sort either of Alkaline or Acid Liquor dropp'd thereupon. Neither being burn'd doth it stink, it consisteth therefore of no Animal substance; but the Girl being of the Green-sickness age, the gritty parts (with the glassy particle in the Centre, as the most ponderous and least moveable) seems to be broken off of Tobacco-Pipes, and grownd small between her Teeth; the downy or fuzzy to be lick'd or scrap'd off the Lean of Mutton, or the Rind of Peaches, or the other Part or Plant. Her Stomach kneading the Matter into a Coat, as her changeable Appetite supply'd it alternately with one or the other sort.
